CHAPTER 1

PROJECT PLANNING & ENVIRONMENT SETUP

1.1 Introduction

Project Overview

Fee Payment Record System na oru web application.

Indha application use panni college student-oda fee details maintain pannalaam.

Manual register use pannama database-la save pannuvom.

Admin student details add pannuvaar.

Fee pay pannumbodhu balance automatic-aa calculate aagum.

Receipt generate pannalaam.

Reports paakkalaam.

Search pannalaam.

Idhu small colleges, diploma colleges-ku use aagura application.

1.2 Project Objective

Indha project-oda main objective

- ✓ Student details maintain pannanum.
 - ✓ Fee payment save pannanum.
 - ✓ Pending fees identify pannanum.
 - ✓ Receipt generate pannanum.
 - ✓ Reports create pannanum.
 - ✓ Manual work reduce pannanum.
-

1.3 Scope

Indha project use pannuvathu

College Office

Accounts Department

Admin

Cashier

Student direct database access panna mudiyadhu.

Admin mattum login pannuvaar.

1.4 Software Requirements

Operating System

Windows 10 / Windows 11

Editor

Visual Studio Code

Server

XAMPP

Database

MySQL

Browser

Google Chrome

Frontend

HTML

CSS

Bootstrap

JavaScript

Backend

PHP

1.5 Hardware Requirements

Processor

Intel i3 / i5

RAM

Minimum 4 GB

Storage

20 GB Free Space

Internet

Required only for Bootstrap download and GitHub.

1.6 Member Work Distribution

Member 1 Responsibilities

Member 1 project-oda backend side handle pannuvaar.

Works

- ✓ Database Design
 - ✓ Login Module
 - ✓ Student CRUD
 - ✓ Database Connection
 - ✓ Validation
 - ✓ Testing
 - ✓ GitHub Upload
-

Member 2 Responsibilities

Member 2 frontend and reporting handle pannuvaar.

Works

- ✓ UI Design
- ✓ Bootstrap
- ✓ Dashboard

- ✓ Fee Module
 - ✓ Receipt
 - ✓ Reports
 - ✓ Documentation
-

1.8 Environment Setup

Member 1

Step 1

Visual Studio Code install pannanum.

Purpose

Project create panna.

Expected Output

VS Code successfully install aaganum.

Step 2

XAMPP install pannanum.

Install pannumbodhu

Apache

MySQL

select pannunga.

Purpose

PHP run panna.

Database connect panna.

Expected Output

XAMPP install aagirukkanum.

Step 3

Apache Start pannanum.

Green color show aaganum.

Expected Output

Apache Running.

Step 4

MySQL Start pannanum.

Green color show aaganum.

Expected Output

Database Ready.

Step 5

Browser-la

http://localhost

open pannunga.

Expected Output

XAMPP Dashboard open aaganum.

Step 6

Browser-la

<http://localhost/phpmyadmin>

open pannunga.

Expected Output

phpMyAdmin open aaganum.

Step 7

New Database create pannunga.

Database Name

fee_management

Expected Output

Database Ready.

Step 8

Project-ku required tables list prepare pannunga.

admin

students

fees

Purpose

Project planning.

Expected Output

Database planning complete.

Member 2

Step 1

Desktop-la

Fee-Payment-System

folder create pannunga.

Purpose

Project files store panna.

Expected Output

Folder Ready.

Step 2

VS Code-la folder open pannunga.

Expected Output

Project Ready.

Step 3

Folders create pannunga.

assets

config

students

fees

reports

includes

database

Expected Output

Folder structure complete.

Step 4

assets folder-ku ulla create pannunga.

css

js

images

bootstrap

Expected Output

Frontend folders ready.

Step 5

Common PHP files create pannunga.

index.php

login.php

dashboard.php

logout.php

header.php

footer.php

navbar.php

sidebar.php

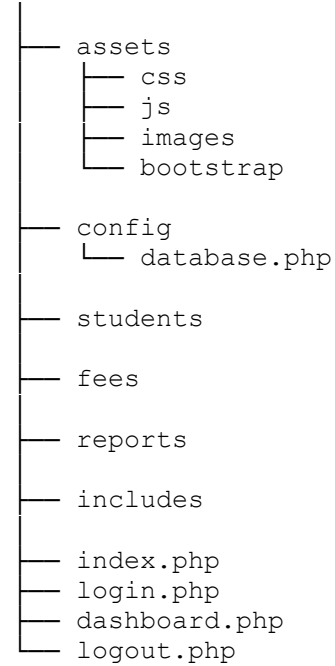

database.php

Expected Output

Basic project ready.

Fee-Payment-System

1.10 Chapter 1 Algorithm

Start

↓

Install VS Code

↓

Install XAMPP

↓

Start Apache

↓

Start MySQL

↓

Open phpMyAdmin

↓

Create Database

↓

Create Project Folder

↓

Create Folder Structure

↓

Ready for Development

↓

End

1.11 Expected Output

Week 1 mudiyumbodhu

☒ VS Code Ready

- ☒ XAMPP Ready
 - ☒ Database Ready
 - ☒ Folder Structure Ready
 - ☒ Project Development Ready
-

1.12 Common Mistakes

- ✗ Apache start panna marandhuduvanga.
 - ✗ MySQL start panna marandhuduvanga.
 - ✗ Wrong database name create pannuvanga.
 - ✗ Files random folder-la create pannuvanga.
 - ✗ Bootstrap proper-aa link panna maattanga.
-

1.13 Viva Questions

Q1. XAMPP use enna?

Answer:

PHP and MySQL local computer-la run panna use pannuvom.

Q2. phpMyAdmin use enna?

Answer:

Database create, edit, delete panna use pannuvom.

Q3. VS Code use enna?

Answer:

Project code write panna use pannuvom.

Q4. Bootstrap use enna?

Answer:

Responsive UI create panna use pannuvom.

☒ Chapter 1 Completed

CHAPTER 2 – LOGIN MODULE

Goal: Indha chapter mudiyumbodhu **Admin Login System** complete aagirukkanum.

2.1 Module Name

Login Module

2.2 Purpose

Login page use panni Admin mattum system access panna mudiyum.

Security-ku idhu romba mukkiyam.

Student direct-aa Dashboard open panna mudiyadhu.

2.3 Member Work

Member 1

Responsible For

☒ Login Page

☒ Database Connection

☒ Login Validation

☒ Session

☒ Logout

Member 2

Responsible For

☒ Login UI Design

☒ Responsive Design

☒ Logo

☒ Background

☒ Error Message Design

2.4 Files Create Pannanum

Member 1 create panna files

`login.php`

`database.php`

`check_login.php`

`dashboard.php`

`logout.php`

Member 2 create panna files

`style.css`

`logo.png`

`background.jpg`

2.5 Procedure

STEP 1

Member 2

Create Login Page UI

Page Name

`login.php`

Purpose

Admin login panna.

Output

Blank Login Page Ready.

STEP 2

Create Bootstrap Container

Purpose

Center-la form show panna.

Output

Container Ready.

STEP 3

Add College Logo

Place

Top Center

Purpose

Professional look.

Output

Logo Display.

STEP 4

Heading Add

Heading

Fee Payment Record System

Sub Heading

Admin Login

Output

Heading Display.

STEP 5

Username Textbox Add

Label

Username

Placeholder

Enter Username

Required

Yes

Purpose

Username enter panna.

Output

Username Field Ready.

STEP 6

Password Textbox Add

Label

Password

Placeholder

Enter Password

Input Type

Password

Purpose

Password secure-aa enter panna.

Output

Password Field Ready.

STEP 7

Login Button Add

Button Name

LOGIN

Button Color

Bootstrap Primary

Purpose

Login process start panna.

Output

Button Ready.

STEP 8

Forgot Password

Simple Link

Forgot Password?

Purpose

Future Enhancement.

Output

Link Display.

2.6 Member 1 Work

STEP 9

Create Database Connection

File

`database.php`

Purpose

PHP database connect panna.

Output

Connection Success.

STEP 10

Create Admin Table

Fields

`id`

`username`

`password`

Purpose

Admin details store panna.

Output

Table Ready.

STEP 11

Insert One Admin

Example

Username

admin

Password

admin123

Purpose

Testing.

Output

Admin Account Ready.

STEP 12

Check Empty Fields

Condition

Username empty-aa irundha

Show

Enter Username

Password empty-aa irundha

Show

Enter Password

Output

Validation Working.

STEP 13

Check Username

Purpose

Database-la username exist-aa check pannum.

Output

Username Found.

STEP 14

Check Password

Purpose

Correct password verify pannum.

Output

Password Verified.

STEP 15

Create Session

Purpose

Admin login status maintain panna.

Output

Session Created.

STEP 16

Redirect

Correct Login

Dashboard

Wrong Login

Error Message

Output

Login Working.

2.7 Login Flow

Admin Open Login Page

Enter Username

Enter Password

Click Login

Validation

Valid

Invalid

Dashboard

Error Message

2.8 Validation

Check 1

Username Empty

Show Error

Check 2

Password Empty

↓

Show Error

Check 3

Wrong Username

↓

Invalid Username

Check 4

Wrong Password

↓

Invalid Password

Check 5

Correct Login

↓

Dashboard

2.9 Logout

Purpose

Secure-aa system exit panna.

Procedure

Click Logout

Destroy Session

Redirect Login Page

Output

Logout Success.

2.10 Expected Output

Member 1

- ☒ Login Working
 - ☒ Database Connected
 - ☒ Session Working
-

Member 2

- ☒ Beautiful Login UI
 - ☒ Responsive Design
-

2.11 Common Mistakes

- ✗ `database.php` include panna marakkadhe.
- ✗ Session start panna marakkadhe.
- ✗ Password field `text` type use pannadhe (`password` type use pannu).
- ✗ Dashboard direct URL access allow pannadhe (session check pannu).

2.12 Viva Questions

Q1. Login page use enna?

Answer:

Authorized admin mattum system access panna.

Q2. Session use enna?

Answer:

Login state maintain panna.

Q3. Database connection use enna?

Answer:

Admin details verify panna.

Q4. Validation use enna?

Answer:

Empty fields, wrong username/password prevent panna.

☒ Chapter 2 Completed

CHAPTER 3 – DASHBOARD MODULE

hboard na project-oda main page.

Login success aana apram Admin first paakura page idhu.

Indha page-la project summary ellam display aagum.

3.2 Purpose

Dashboard use pannuradhu

- ✓ Total Students paakka
 - ✓ Total Collection paakka
 - ✓ Pending Fees paakka
 - ✓ Recent Payments paakka
 - ✓ Different modules-ku easy navigation kudukka
-

3.3 Member Work Distribution

Member 1

Responsible For

- ✓ Dashboard Backend
 - ✓ Database Query
 - ✓ Statistics
 - ✓ Session Check
 - ✓ Navigation Logic
-

Member 2

Responsible For

- ✓ Dashboard UI
- ✓ Bootstrap Cards
- ✓ Sidebar

- ✓ Navbar
 - ✓ Footer
 - ✓ Responsive Design
-

3.4 Dashboard Files

Member 1

Create

`dashboard.php`

`dashboard_data.php`

Purpose

Database-la irundhu data fetch panna.

Member 2

Create

`sidebar.php`

`navbar.php`

`footer.php`

`dashboard.css`

Purpose

Dashboard design create panna.

3.5 Dashboard Layout

Dashboard open aana

Top

↓

Navbar

Left Side

Sidebar

Center

Dashboard Cards

Bottom

Footer

3.6 STEP BY STEP PROCEDURE

Member 2

STEP 1

Create

dashboard.php

Purpose

Dashboard page create panna.

Output

Blank Dashboard Ready.

STEP 2

Navbar create pannanum.

Navbar-la

✓ Project Name

✓ Admin Name

✓ Logout Button

Output

Navbar Ready.

STEP 3

Sidebar create pannanum.

Sidebar Menu

Dashboard

Students

Fee Payment

Payment History

Reports

Logout

Output

Sidebar Ready.

STEP 4

Dashboard Heading

Heading

Dashboard

Sub Heading

Welcome Admin

Output

Heading Display.

STEP 5

Create Bootstrap Cards

Card 1

Total Students

Card 2

Total Collection

Card 3

Pending Fees

Card 4

Today's Collection

Output

Cards Display.

STEP 6

Responsive Design

Laptop

↓

4 Cards in One Row

Tablet

↓

2 Cards

Mobile

↓

1 Card

Output

Responsive Dashboard.

Member 1

STEP 7

Session Check

Purpose

Login pannama dashboard open panna koodadhu.

Process

Session irundha

↓

Dashboard Open

Session illa

↓

Login Page Redirect

Output

Security Added.

STEP 8

Database Connect

database.php include pannanum.

Purpose

Dashboard-ku data fetch panna.

Output

Connection Success.

STEP 9

Student Count

Database-la

students table count pannanum.

Output

Example

Total Students : 150

STEP 10

Total Fee Collection

fees table-la

Paid Amount total calculate pannanum.

Output

Example

₹ 4,50,000

STEP 11

Pending Fees

Balance amount calculate pannanum.

Output

Example

₹ 85,000

STEP 12

Today's Collection

Today payment mattum calculate pannanum.

Output

Example

₹ 12,500

STEP 13

Recent Payments

Last 5 payment display pannanum.

Columns

Student Name

Department

Amount

Date

Output

Recent Payments Table Ready.

3.7 Dashboard Menu

Sidebar-la

Dashboard

↓

Student Management

↓

Fee Payment

Payment History

Reports

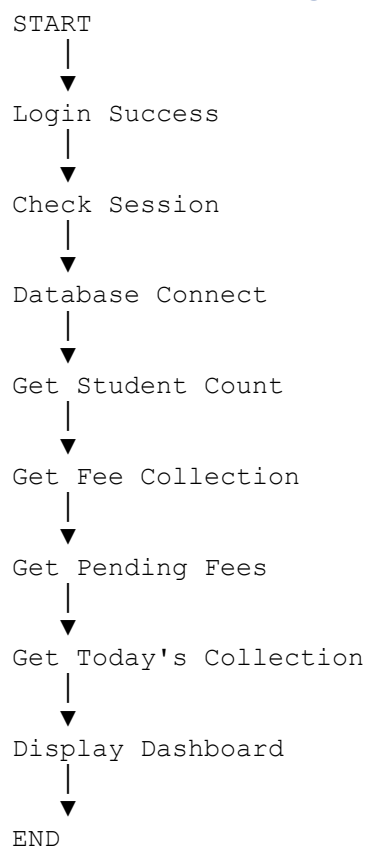

Logout

Purpose

Easy navigation.

3.8 Dashboard Algorithm

3.9 Dashboard Output

Dashboard-la display aaganum

✓ Total Students

- ✓ Total Collection
 - ✓ Pending Fees
 - ✓ Today's Collection
 - ✓ Recent Payments
 - ✓ Sidebar
 - ✓ Navbar
 - ✓ Logout Button
-

3.10 Common Mistakes

- ✗ Session check panna marakkadhe.
 - ✗ Database include panna marakkadhe.
 - ✗ Wrong SQL query use pannadhe.
 - ✗ Dashboard mobile responsive pannama vidradhe.
 - ✗ Sidebar links check pannama vidradhe.
-

3.11 Expected Output

Member 1

- ☒ Dashboard Backend Ready
 - ☒ Statistics Working
 - ☒ Session Security Working
-

Member 2

- ☒ Dashboard UI Ready

☒ Responsive Design Ready

☒ Navigation Ready

3.12 Viva Questions

Q1. Dashboard use enna?

Answer:

Project-oda mukkiyamaana statistics-ai ore page-la paakka use pannuvom.

Q2. Dashboard-la enna details display pannuvom?

Answer:

Total Students, Total Collection, Pending Fees, Today's Collection, Recent Payments.

Q3. Session check yen use pannuvom?

Answer:

Login pannadha users dashboard access panna koodadhu.

Q4. Responsive Dashboard-na enna?

Answer:

Laptop, Tablet, Mobile ellathulayum correct-aa display aagura dashboard.

Next Chapter 4 – Student Management Module

Goal: Admin student details add, edit, delete, search, view panna mudiyandum.

4.1 Module Name

Student Management Module

4.2 Purpose

Indha module use pannadhu student details manage panna.

Admin pudhu student add pannuvaar.

Existing student details edit pannalaam.

College vittu pona student delete pannalaam.

Search pannalaam.

List view pannalaam.

4.3 Member Work Distribution

Member 1 (Backend)

Responsible For

- Student Database
- Add Student Logic
- Edit Student Logic
- Delete Student Logic

- Search Logic
 - Validation
 - Database Connection
-

Member 2 (Frontend)

Responsible For

- Add Student Form
 - Student List Table
 - Search Box UI
 - Bootstrap Design
 - Buttons Design
 - Responsive Layout
-

4.4 Files Create Pannanum

Member 1

Create

`add_student.php`

`edit_student.php`

`delete_student.php`

`save_student.php`

`update_student.php`

`student_search.php`

Purpose

Student CRUD operations handle panna.

Member 2

Create

`student_list.php`

`student.css`

Purpose

Student UI create panna.

4.5 Student Table Structure

Database Table Name

students

Columns

Field	Description
id	Primary Key
reg_no	Register Number
student_name	Student Name
department	Department
year	Year
mobile	Mobile Number
email	Email Address

4.6 Student Module Flow

Search Student

4.7 STEP BY STEP PROCEDURE

Member 2

STEP 1

Create

`add_student.php`

Purpose

Student form create panna.

Output

Blank Form Ready.

STEP 2

Heading

`Add Student`

Purpose

User-ku page identify panna easy.

STEP 3

Create Form

Bootstrap Card use pannanum.

Output

Form Ready.

STEP 4

Add Register Number Field

Label

`Register Number`

Placeholder

Enter Register Number

Validation

Required.

STEP 5

Add Student Name Field

Label

Student Name

Validation

Required.

STEP 6

Department Dropdown

Options

- CSE
- EEE
- ECE
- MECH
- CIVIL

Purpose

Department select panna.

STEP 7

Year Dropdown

Options

- First Year
- Second Year
- Third Year

STEP 8

Mobile Number

Maximum

10 digits.

Validation

Only Numbers.

STEP 9

Email Field

Purpose

Student Email store panna.

Validation

Valid email format.

STEP 10

Buttons Add

Buttons

- Save
- Reset
- Cancel

Output

Form Complete.

Member 1

STEP 11

Database Connection

Purpose

Student details save panna.

Output

Database Connected.

STEP 12

Check Empty Fields

Validation

- Register Number
- Student Name
- Department
- Year

Empty-aa irukka koodadhu.

STEP 13

Check Duplicate Register Number

Same Register Number already irundha

Display

Register Number Already Exists

Purpose

Duplicate records avoid panna.

STEP 14

Save Student

All validations success aana

↓

Database Save

Success Message

Student Added Successfully

STEP 15

Redirect

Student save aana

Student List Page open aaganum.

4.8 Student List Page

Member 2

Student List table create pannanum.

Columns

- Register Number
- Student Name
- Department
- Year
- Mobile
- Email
- Action

Action Buttons

- Edit
 - Delete
-

Member 1

Database-la irundhu students fetch pannanum.

All records table-la display pannanum.

4.9 Edit Student

Purpose

Existing student details update panna.

Procedure

Click Edit

↓

Existing details load aaganum.

↓

Required field update pannunga.

↓

Click Update.

↓

Database update aaganum.

Output

Student Updated Successfully

4.10 Delete Student

Purpose

Wrong record remove panna.

Procedure

Click Delete

↓

Confirmation Message

Are you sure?

↓

Yes

↓

Delete Record

↓

Success Message

Student Deleted Successfully

4.11 Search Student

Search by

- Register Number
- Student Name
- Department

Purpose

Student easy-aa find panna.

4.12 Validation

Check 1

Register Number empty-aa irukka koodadhu.

Check 2

Student Name empty-aa irukka koodadhu.

Check 3

Mobile Number

10 digits irukkanum.

Check 4

Email format correct-aa irukkanum.

Check 5

Duplicate Register Number allow panna koodadhu.

4.13 Algorithm

```
START
    ↓
Open Student Module
    ↓
Click Add Student
    ↓
Enter Student Details
    ↓
Validate Input
    ↓
Duplicate Check
    ↓
Save Database
    ↓
Show Success Message
    ↓
Display Student List
    ↓
END
```

4.14 Expected Output

Member 1

- Student Add Working
 - Student Edit Working
 - Student Delete Working
 - Search Working
-

Member 2

- Form UI Ready
- Student Table Ready
- Responsive Design Ready

4.15 Common Mistakes

- ✗ Register Number duplicate check panna marakkadhe.
 - ✗ Delete confirmation kudukka marakkadhe.
 - ✗ Mobile field-la letters allow pannadhe.
 - ✗ Required validation skip pannadhe.
 - ✗ Search box work aagudha-nu test panna marakkadhe.
-

4.16 Viva Questions

Q1. Student Management Module use enna?

Answer: Student details add, edit, delete, search panna use pannuvom.

Q2. Register Number unique-aa irukkanum-na enna reason?

Answer: Oru student-ku oru unique identity venum. Duplicate records avoid panna.

Q3. CRUD-na enna?

Answer:

- **C** – Create (Add Student)
 - **R** – Read (View Student)
 - **U** – Update (Edit Student)
 - **D** – Delete (Remove Student)
-

Q4. Validation use enna?

Answer: Wrong data database-la save aaguradha prevent panna.
